

1. A computer-implemented method for determining a price of goods made by a manufacturer in response to at least one electronic price request from a buyer for the goods, comprising the acts of:

receiving the electronic price request from the buyer;

in response to the electronic price request, performing a computer-executed act of determining whether title to the goods passes directly from the manufacturer to the buyer or through an intermediate e-market place;

computing a price of the goods to the buyer based at least partially on the determining act;

providing the buyer with a machine-readable signal for displaying the computed price.

2. The method of Claim 1, wherein a first pricing regime is implemented when it is determined that title to the goods passes directly from the manufacturer to the buyer.

3. The method of Claim 2, wherein when it is determined that title passes through an intermediate e-market place, the method further includes determining whether to implement the first pricing regime or a second pricing different than the first pricing regime.

4. The method of Claim 3, further comprising the act of:  
determining whether to discount a price.
